The Second Longitudinal Study of Aging (LSOA II) Linked Mortality Files

Public-use Detailed Notes for Selected Variables

PUBLICID – LSOA II Public ID Construction

The data items QUARTER x PSU x WEEK x SEGMENT x HOUSEHOLD NUMBER x PERSON NUMBER identify a LSOA II participant. The following identifying items can be concatenated to create the unique person identifier. Note: The public id variable on the public-use LSOA II Linked Mortality File is in character format with an assigned length of 14.

<u>Item</u>	LSOA II Public-use File Location	Variable length	Description
Year (2-digit)	3-4	2	Year of interview
Quarter	5	1	Calendar quarter of interview
PSU	6-8	3	Random recode of PSU
Week	9-10	2	Week of interview within quarter
Segment	11-12	2	Segment number
Household number	13-14	2	Household number
Person number	15-16	2	Person number within household

ELIGSTAT – Eligibility Status for Mortality Follow-Up

LSOA II participants are defined as ineligible for mortality linkage if they had insufficient identifying data to create a National Death Index submission record ([See Mortality Linkage Eligibility, Tables 1 and 2](#)). Please note that there are seven records where there is an indication of deceased status on the LSOA II public-use survey file but were ineligible for NDI linkage. On the LSOA II Linked Mortality File, these cases are indicated as ineligible and do not have any mortality information associated with them. Analysts who want to keep these cases as deceased, based upon the survey indication of death, should note that there will be no cause of death information available.

MORTSTAT – Final Mortality Status

The MORTSTAT variable is NCHS's final determination of vital status and should be used as an outcome variable and to calculate survival. Each LSOA II participant who is eligible for mortality follow-up is assigned a vital status code (0 = assumed alive; 1 = assumed deceased).

MORTALITY SOURCE. NCHS has multiple sources of information to determine the final mortality status of a LSOA II survey participant. Variables indicating which source or sources were used to determine vital status are available on the linked mortality file and are described below. Any combination of these mortality sources was used to identify LSOA II decedents. In a small number of cases, there are inconsistencies in the death information obtained during a LSOA II follow-up period and the LSOA II Linked Mortality File.

The Second Longitudinal Study of Aging (LSOA II) Linked Mortality Files

Public-use Detailed Notes for Selected Variables

MORTSRCE_DCL – Mortality Source: Data Collection

Death information was obtained during the LSOA II follow-up period. Analysts should note that there are records on the LSOA II public-use survey file indicating deceased status but were ineligible for NDI matching. On the linked mortality file, these records are classified as ineligible, and thus have no source of mortality.

MORTSRCE_NDI - Mortality Source: NDI Match

A code 1 indicates that mortality status was ascertained through a probabilistic match to a National Death Index (NDI) record.

MORTSRCE_SSA - Mortality Source: SSA Information

A code 1 indicates that mortality status was obtained from the Social Security Administration (SSA).

MORTSRCE_CMS - Mortality Source: CMS Information

A code 1 indicates that mortality status was obtained from the Centers for Medicare and Medicaid Services (CMS).

MORTSRCE_DCL - Mortality Source: Data Collection

A code 1 indicates that mortality status was obtained from data collection. Death information was obtained during the LSOA II follow-up period. Analysts should note that there are records on the LSOA II public-use survey file indicating deceased status but were ineligible for NDI matching. On the LSOA II public-use linked mortality file, these records are classified as ineligible, and thus have no source of mortality.

DODQTR, DODYEAR – Quarter of Death and Year of Death

A small number of records where mortality status was obtained only through the LSOA II follow-up period (*MORTSRCE_DCL*) do not have date of death information available. These records are indicated with a code 09 (*DODQTR*) or 9999 (*DODYEAR*).

CAUSEAVL – Cause of Death Data Available

Death certificate data is available only for cases where the variable *MORTSTAT*=1 and *MORTSRCE_NDI* = 1. Users should note that it is possible to have an NDI match but no cause of death data available.

The Second Longitudinal Study of Aging (LSOA II) Linked Mortality Files Public-use Detailed Notes for Selected Variables

UCOD_113 - Underlying Cause of Death 113 Groups All Years (ICD-10)

Cause of death coding for all U.S. deaths occurring prior to 1999 follows the 9th revision of the International Statistical Classification of Diseases, Injuries, and Causes of Death (ICD-9) guidelines, while all deaths after 1998 follows the 10th revision of the International Statistical Classification of Diseases, Injuries, and Causes of Death (ICD-10) guidelines. To assist the researcher with analyses that span the entire mortality period, the [UCOD 113](#) variable was created as a recode of all deaths occurring prior to 1999 coded under ICD-9 guidelines into comparable ICD-10 based underlying cause of death groups.

For more on the comparability of ICD-9 and ICD-10 underlying cause of death UCOD 113 recode see: Anderson RN, Minino AM, Hoyert DL, Rosenberg HM. [Comparability of cause of death between ICD-9 and ICD-10: Preliminary estimates](#). National Vital Statistics Reports; Vol 49 No.2. Hyattsville, MD: National Center for Health Statistics. 2001. This document is also available on the NCHS website.

For more information regarding ICD-9 coding guidelines see the Manual of the International Statistical Classification of Diseases , Injuries, and Causes of Death: Based on the Recommendations of the Ninth Revision Conference, 1975, and Adopted by the Twenty-ninth World Health Assembly, Volume 1, 1977 (World Health Organization).

For more information regarding ICD-10 coding guidelines see the International Statistical Classification of Diseases and Related Health Problems, Tenth Revision. (World Health Organization) 1992. Revision, Volume 1.

DIABETES, HYPERTENS, & HIPFRACT—Multiple cause of death flags

Certain contributing causes of death are only coded in the multiple causes of death codes according to ICD coding rules. The current LSOA II Linked Mortality Public-use File does not include the 20 entity-axis multiple causes of death codes. The multiple causes of death codes are only available on the [restricted-use version](#) of the LSOA II Linked Mortality File. However, in an effort to increase the utility of the public datasets, NCHS selected the three most commonly reported conditions found in the multiple causes of death codes (diabetes, hypertension, and hip fracture) and included a flag variable for each condition on the public-use version of the LSOA II Linked Mortality File. The flag variables were coded a 1 if specific ICD codes were found in any one of the 20 contributing or multiple causes of death fields as follows:

DIABETES = '1' if ICD-9 code '250' or ICD-10 codes 'E10 thru E14' was coded in the entity-axis multiple cause of death codes

HYPERTENS = '1' if ICD-9 codes '401' or '403' or ICD-10 codes 'I10' or 'I12' was coded in entity-axis multiple cause of death codes

The Second Longitudinal Study of Aging (LSOA II) Linked Mortality Files

Public-use Detailed Notes for Selected Variables

HIPFRACT = '1' ICD-9 code 'E820' or ICD-10 codes 'S720 thru S722' were coded in entity-axis multiple cause of death codes
